Don Bishop

Clinical Coordinator and Instructor of Radiography

¡Hola! Bonjour! Dobar dan! Guten tag! Hello!

I am Don Bishop, Clinical Coordinator and Instructor for the Allen College Radiography program. I am passionate about the medical imaging profession and enjoy teaching future healthcare leaders. I am the father of 12 wonderful children, two grandchildren and four dogs.

My background in radiography spans from general radiology to the cardiac cath lab, specializing in cardiac electrophysiology. In this field, we use fluoroscopy to view the heart and place electrodes through catheters in the leg into various positions of

the heart to help diagnose and treat patients with arrhythmias. I look for new challenges both at home and work and enjoy playing strategic board and card games.

I believe in creating an environment where everyone is valued, respected, empowered and heard, regardless of their differences. I have a special needs son who is amazing and has taught me more about myself and others than any class or textbook; because of this I am a mental health and special needs advocate who believes in fair opportunity for all.
